

TIMOTHY NG CHONG SHENG

AI ENGINEER

PROFILE

Driven Artificial Intelligence student with hands-on experience in full-stack development, workflow automation, and working with LLMs (Google Gemini/Vertex AI). Adept at building logic-based systems, scraping data, and developing predictive models. Seeking an AI/Machine Learning Engineering internship to apply skills in Python, R, and data preprocessing to solve complex, real-world problems.

WORK EXPERIENCE

WSG DELIVERY INTERN

SETP 2025 - NOV 2025

PointStar Malaysia | Federal Territory of Kuala Lumpur

Designed and developed the "Gemini Model Version Tracker," an automated system to monitor the lifecycle of Google Gemini and Vertex AI models, reducing manual tracking errors and ensuring operational continuity.

- Architected a low-code solution using **Google AppSheet and Google Sheets**, implementing **Role-Based Access Control (RBAC)** across administrative, application owner, and business user tiers.
- Engineered custom **Google Apps Script algorithms** to **scrape real-time HTML data** from official documentation, automating the detection of new model releases, updates, and retirements.
- Built a **logic-based notification system** that calculates expiration timelines and triggers automated Webhook alerts via Google Chat 30, 7, and 2 days prior to model deprecation.
- Structured a **relational database schema** to track user logs, project assignments, and audit trails, guaranteeing seamless synchronization with the frontend dashboard.

PROJECTS

AI PROPERTY RENTAL CHATBOT | Botpress

- An AI-powered chatbot helps users search for rental units in Bukit Jalil through natural conversation.
- Collaborated in a 5-member team to design logic flow, test features, and build a knowledge base.
- Structured an elimination-based search using LLMs, Miro, Draw.io, and Botpress for smarter recommendations.
- Addressed NLP challenges with step-by-step filtering and refinement based on user feedback.

Employee Resignation Predictive Modeling | R, Python

- Performed end-to-end data preprocessing on raw datasets to clean and structure information for analysis.
- Developed a predictive model to forecast the resignation rate of employees based on financial and wealth status factors.

Secure Linux Infrastructure & Server Administration | Rocky, Ubuntu

- Engineered and deployed a secure, multi-node Linux server environment using Rocky Linux as the primary host and Ubuntu as the client architecture.
- Architected a complete domain infrastructure by configuring a BIND DNS server for both local and external FQDN resolution.
- Deployed an Apache web server and an enterprise mail server (Postfix/Dovecot), enforcing strict security protocols including SSL/TLS encryption for secure HTTPS access and client-side email transmission.
- Executed advanced system diagnostics and troubleshooting to resolve complex network and service integration challenges autonomously.

EDUCATION

Bachelor of Computer Science (Hons) (Artificial Intelligence)

Asia Pacific University
• Feb 2026 - Present

Diploma in Information & Communication Technology Specialism in Software

Asia Pacific University
• Aug 2023 - Nov 2025
• CGPA: 3.84

Sijil Pelajaran Malaysia (SPM)

SMK Pusat Bandar Puchong (1)
• Achieved 8A, 2B

SKILLS

Technical Skills

- Python
- Java
- HTML, CSS, JavaScript, PHP
- Rocky
- Ubuntu
- R
- Github

Soft Skills

- Analytical Problem Solving
- Agile Adaptability
- Team Communication
- Critical Thinking
- Team Collaboration

LANGUAGES

- English - Fluent
- Chinese - Native
- Malay - Fluent
